Who we are

We are one of the leading and successful entities that provide services related to Infrastructure/Civil Construction. **Shubham Enterprises** was founded by Shri. Shubham Shivaji Gadhave Led by his able guidance, to date, we have been delivering assigned projects at all locations well within the given timeframes following the stipulated technical specifications, quality control measures, all while abiding by stringent safety and security measures. Starting in 2018, we have grown as a quality-first organisation that serves the civil engineering construction industry by providing a wide range of services.

**We have
Contributed
our part in
Pune &
Mumbai's
Growth.**

Our core competencies are Civil Construction, Land Development, Ground Engineering, and Foundation Excavation work, which involves different Rock Excavations with Blasting and Non-blasting methods, Chemical Rock Splitting, Diamond Rope Cutting, and Piling

works with various diameters. Our legacy of accomplishments speaks for itself. We work with experts and experts alone in all the sectors of Civil construction. Our name is synonymous with on-time delivery, no matter how complex the project is. Due to this, we always have a steady growth in our financial turnovers year on year.

We are known for going the extra mile to achieve perfect and client satisfaction by completing projects on time and within the approved budget. We ensure strict and highest standards of quality assurance; the outcome of each project is no less than extraordinary. We have completed lots of challenging works with numerous MNCs Industrial and commercial complexes and residential units, with a special emphasis on IT-related companies. To proudly say, we have contributed our part in Pune and Mumbai's Growth.

Our operations are headquartered in Pune and Mumbai.

To be a world-class Infrastructure company and collaborate with different organisations to improve the quality of everyday life.

VISION

Executing **world-class** projects with finesse and professionalism.

MISSION

- Passion towards excellence
- Adhering to the project schedule
- Highest morale in execution
- Innovation
- Quality centric
- Safety & Sustainability

VALUES

10 Years of
excellence

150 Projects
completed

5+ Projects
ongoing

10+ Crores worth
resources

Services

we offer

Our range of services covers a wide gamut of land works from developing the land prior to construction to building superstructures.

LAND

DEVELOPMENT

Meticulous planning under the supervision of expert engineers is essential for the successful outcome of any given project. The process of Land development requires loads of equipment and skilled workers to carry out every aspect properly.

High-rise buildings, cellars/basements, Mass bulk water transport and Sewer transport systems require deep excavation.

We offer our services for:

- Site grading
- Ground Levelling and survey
- Hard Rock excavations (Blasting / Non-Blasting Methods)
- Deep excavation for Basement/Cellar construction in soil, and Hard Rock
- Implosion Techniques
- Cast in-situ piling of various diameters

Peripheral/External Development Works

Roads build cities and societies. India has the second-largest road network globally. Such a vast network of roads enables us to spread the essentials such as Water and Petroleum effectively. We excel in providing services for all Peripheral & External development works.

Our services include:

- Initial Survey & Ground Investigation
- Construction of roads
- Laying of pipelines for Water Distribution, Petroleum / Gas transportation
- Construction of Compound Walls
- Construction of trenches for utilities such as Cable laying.

Ground Engineering

In a nutshell, Ground Engineering is the study of the elements of the ground and how they can be applied to construction and development. By including the studies in the real world, we bring practical solutions to all the ground related issues.

At Associated Projects Infra, we have extensive experience and knowledge on Ground Engineering and have successfully delivered multi-million projects with 100% client satisfaction.

The services included in Ground Engineering are:

- Micro Piling and cast-in-situ RCC piling
- Soil Nailing Techniques
- Sub-Soil Dewatering
- Shotcreting
- Assessing slopes and providing Hazard control

**Successfully
delivered
multi-million
projects with
100% client
satisfaction.**

Civil Construction

We all learned that shelter is one of the common necessities of a human being. From planning to analysing the structural integrity to construction, we offer all services with advanced equipment that can handle any advanced engineering techniques. Our team includes design specialists and structural engineers with extensive experience in Civil engineering. We're incredibly proud of the multiple Civil & Industrial construction projects we've executed.

These are the services we offer in Construction:

- Planning and strategising construction work
- Ground planning and engineering
- Diaphragm wall construction
- Cast in-situ RCC piling for SBC enhancement
- Sub-Structure Construction
 - Basement Construction/Cellar Construction
- Superstructures
 - Industrial, Residential and Commercial buildings

Being safe while executing world-class projects is a crucial part of delivering the job safely. We conduct regular inspections and training sessions to ensure that every individual stepping into the site is aware of all the safety measures in order to avoid unnecessary risks. Not just that, we constantly conduct training sessions for our personnel and update our training sessions and equipment so that we protect the ones that make it all happen.

Below are a few safety gears we provide to our staff:

Safety Helmets

Reflective Safety Jackets

Safety Shoes

Knitted Hand Gloves

Clear Safety Goggles

Ear Plugs

Machinery we offer

Our machinery and equipment speak all about us.

From survey and civil construction to excavation, below is the list of machinery and equipment we provide:

- Excavators
- Dumpers
- Jack Hammer Drills
- Wagon Drills
- Explosives Mobile Magazines

- Seismographs are used for stringent monitoring to observe and follow preventive measures during controlled blasting operations
- Water Tanker with Sprinkler Attachments
- Dozers
- Dewatering pumps

- Diamond Rope Cutting Units
- Blasting Mats/Rubber Mats are used to control the rocks' fly in hard rock blastings
- QC Lab
- Pile Load Testing Equipment
- Backhoe
- Hydraulic Rotary Rig

- Shuttering Material
- Batching Plant 6.35
- Concrete Pumps
- Concrete Transit Mixers
- Bar Bending Machines
- Mobile Light Towers
- Captive Power Generators
